

WHEEL RISERS

The majority of loading docks are built to suit the facilities current needs without much regard for what type of freight will be received in the future. When this results in trucks coming in below dock level an unsafe loading environment is created. To eliminate the potential risks of this scenario wheel risers are a low cost portable/semi-permanent solution that requires no modifications to your loading dock.

Steel Wheel Risers (SWR)

Ideal for permanent placement or for facilities with forklift access to the ground, Steel wheel risers offer both a lower price point as well as a greater weight capacity than aluminum wheel risers. For facilities looking to dedicate a specific door to receive lower trucks the permanent mounting tabs make the SWR the ideal option.

- 40,000 Lb Capacity per pair
- Powder Coated Steel
- Optimal Forklift Pockets (no additional charge)
- Comes standard with mounting tabs
- Extra wide models for tandem axles
- Split models for sloped docks
- Every unit comes tailored to your specific needs
- Manufactured in the USA

Aluminum Wheel Risers (AWR)

A lighter weight alternative to the steel wheel riser, the aluminum wheel riser with its handhold cutouts is an ideal option for facilities without forklifts or forklift access to the ground.

- 30,000 Lb capacity per pair
- Corrosion resistant
- Cut outs for lifting by hand
- All aluminum construction
- Ideal for operations with no forklift
- Can be moved by hand
- Available with mounting tabs for permanent placement
- Extra wide 24" models for tandem axles
- Split models for sloped docks
- Every unit comes tailored to your specific needs
- Manufactured in the USA
